ABOUT US

Mensch Robotics is a deeptech robotics startup on a mission to build human-centric robots for societal advancement. Incorporated in 2024 and backed by the Kerala Startup Mission, IHFC, and Startup India, we bring the discipline of a growing company to an ambitious goal — using physical AI to uplift the sectors that matter most.

We build with intent. Every robot we create is guided by four beliefs: that the highest efficiency comes from genuine care for the work and the people behind it; that a human being is not a resource but a possibility worth nurturing to its fullest; that AI-driven innovation should create measurable impact, not just novelty; and that purpose — not just output — is what every team member works toward.

"At Mensch Robotics, we don't just build machines — we build possibility. Join us as we bring physical AI closer to the people and sectors it's meant to serve."

ABOUT SOVI-GREET

SOVI-Greet is Mensch Robotics' AI-powered humanoid reception companion, built to bring a physical, responsive presence into lobbies, offices, and front desks. Designed to work alongside your front-desk staff rather than replace them.

SOVI-Greet can hold real conversations, answer visitor queries, and speak in multiple languages — turning everyday check-ins into a welcoming experience. It recognizes returning visitors, remembers them across visits, and reacts with natural gestures and expressive eyes, making every interaction feel personal rather than programmed.

HARDWARE SPECIFICATIONS

- ✓ **High-performance onboard AI processor**
- ✓ **Autonomous and manual navigation modes**
- ✓ **3 DoF per arm — shoulder, elbow, and palm articulation**
- ✓ **Rotating head with expressive LED eyes**
- ✓ **Integrated camera, mic, and speakers**
- ✓ **Durable fibre-and-metal frame with protected power system**

Two ways of Movement

Autonomous mode

SOVI navigates on its own, sensing and steering around obstacles as it moves through a room.

Manual mode

An android app drives SOVI over Bluetooth — direct, hands-on control when you want it.

COMPLIANCE & SAFETY

Safety Standards

Designed and manufactured in line with industry safety regulations, SOVI is engineered for dependable, secure operation in both classrooms and homes — so educators and parents can trust it around students.

User Guidelines

SOVI is delivered with detailed setup and usage instructions, along with hands-on mentor training sessions. This ensures every user can operate SOVI confidently and responsibly, while maintaining proper safety practices throughout.

Warranty

Each SOVI unit is covered by a 1-year processor warranty, protecting against manufacturing defects and malfunctions. It's part of our broader commitment to customer satisfaction — reliable hardware, backed by dedicated support.

Terms & Conditions

1. Delivery Schedule: Delivery will be completed within 6 weeks from the date of receipt of the advance payment.
2. Taxes: IGST @ 18% is included in the invoice value.
3. Logistics: Packing, forwarding, freight, and unloading charges are included in the quoted price.
4. Pre-installation Requirement: The customer shall provide basic workshop tools required for installation.
5. Payment Terms: 70% advance payment against the Purchase Order and the remaining 30% within one week after delivery/installation (or as agreed).

FAQ

MENSCH
ROBOTICS

Q What is SOVI-Greet?

A A humanoid reception robot from Mensch Robotics that welcomes, checks in and assists visitors by voice.

Q How is SOVI-Greet different from a regular reception desk or a kiosk?

A It is voice-first, so visitors simply talk to it. It also moves, gestures and shows expressions with its LED eyes, and it speaks several languages, which makes the first impression more engaging than a static screen.

Q How does the smart visitor check-in work?

A The visitor tells their name, who they are meeting and the purpose of their visit. It records the details and informs the right person.

Q What kind of questions can the Intelligent Q&A answer?

A Directions, department locations, timings, services, staff availability, event schedules and other FAQs specific to your organisation.

Q Can SOVI-Greet use gestures?

A Yes. Each arm has 3 DOF (shoulder, elbow and palm), so it can wave, greet and gesture while it talks.

Q Can SOVI look things up in real time if it doesn't know the answer?

A Yes — SOVI can toggle live web search on or off, and also draws on a built-in knowledge base for grounded, document-based answers when configured with reference material.

Q Do we get support after purchase?

A Yes — we provide onboarding training and ongoing technical support
